

We are searching for a suitable person to start as soon as possible in our “**European Pharmacological Intelligence**” as

## ***European R&D Medical / Scientific Adviser (m/f)***

### **Goals**

With your genuine interest in new medical concepts and product development you will initiate and coordinate the evaluation of new project opportunities within the European R&D research organisation. Furthermore you will support New Business Development and clinical project teams with your medical and scientific advice.

### **Main responsibilities**

- Responsible for the structured review and evaluation of new project opportunities in our major R&D areas (CNS, Oncology, Asthma, COPD)
- Support the R&D Innovation Process by close collaborations with the different departments and key opinion leaders from within and outside our organisation
- Actively support R&D project teams with your medical or scientific expertise
- Generate analytical reports on new R&D project concepts for senior management
- Support due diligence activities of European Business Development

### **Requirements**

- Medical or scientific education and first working experience in pharmaceutical or biotechnological industry
- Excellent working knowledge in medical science
- Ability to work across different therapeutic areas
- Confident and competent to set priorities, make decisions and deliver results
- A teamplayer with strong interpersonal and communication skills
- Proactive approach
- Knowledge of economical aspects in health care is advantageous

### **Proposed salary level and working time**

- Not according to officially stipulated agreement, full-time

This position is also suitable for severely disabled employees who have all the qualifications outlined above. If you feel challenged by this position, we look forward to receiving your detailed application.
